

## **REQUEST TO AMEND CONSTRUCTION PERMIT**

Because of the many products which are used to replace gravel in absorption field trenches, the Whitfield County Environmental Health Office cannot specify the required footage for all of these products on the installation permit. Therefore, the permits specify absorption trench length and width for standard gravel systems only. Substitution for an alternate product approved by the Georgia Department of Human Resources for use in septic system absorption fields may only be made with written permission of the property owner.

**Property owner**

---

**Property address**

I request the on-site sewage management system construction permit for the above mentioned property be amended to allow the installation of the following septic system drain field product:

\_\_\_\_\_ with an equivalency factor of \_\_\_\_\_.  
This product will require \_\_\_\_\_ linear feet of absorption line to be installed in a \_\_\_\_\_ inch wide trench at \_\_\_\_\_ inches deep.

I have chosen to use this absorption field product in accordance with the manufacturer's recommended installation requirements and in compliance with Georgia Department of Human Resources requirements. The grant and use of said product/system by the county board of health does not constitute a warranty or endorsement of the product.
